## ■ OUR ADVANTAGES

We Diamond Elevators Team is vibrant energetic group having many years' experience in this field of new installations, modernization and maintenance of all types of Elevators. We utilizes the most advanced state-of-the-art technologies available.

# PASSENGER LIFT

Manufacturing the Passenger Lifts with the advanced technology with an assortment of various Passenger Lift delivering to our clients all over the nation.

This Lift finds the application at numerous Residential and Commercial centers that receives numerous people on an everyday basis. Passenger Elevators have a characteristic of enhancing the longer life and performance of the lifts. They can be designed in accordance with our customer's needs.

Passenger Lifts are convenient and suitable as well as known for their optimum performance, strength and durability and low maintenance rate. In all, the Passenger Lifts caters to the flow of every day demanding people ensuring a comfortable ride featuring a broad range of designer options and at the same time maintaining the much-needed eco-efficiency sustenance.

# GOODS CUM PASSENGER LIFT

We are able to manufacture and supply the finest quality goods cum passenger lifts for our valued customers. Our stock includes some latest design and cutting-edge technology based good cum passenger lifts that are made up of the finest material and are useful for bearing heavy loads and passengers as well. These lifts are suitable to install in buildings and complexes for lifting people upward and downward in a multistory structure. Also, the lifts have made capable to bear loads in industries with ease. These lifts are available in diverse load bearing capacities through us.

# HOIST LIFT

We take pride to develop and supply the finest quality electric wire rope Hoist made up of quality material. This product is ideal to use for lowering and lifting heavy loads via a lift wheel or drum that is wrapped across by chain and rope. We make this quality item in customized specifications of our client as well.

## CAR LIFT

Car / Vehicle Lift is extensively used for the easy movement of cars and vehicles across the floors of buildings, malls, hotels, hospitals and showrooms. Car Lifts are a significant part of high-rise car parking. Mainly used for parking non-commercial vehicles, our range finds application in private garages, apartments, complexes, car show rooms and service stations. Operating with the help of hydraulic power pack or with geared machine car elevator will help to move cars up and down on the parking. The lifts are designed and manufactured according to the inputs and requirements of customers. Our car lifts are steady and give jerk less experience while lifting your car. We make it special because we understand your love for your car.

## TEMPORARY LIFT

We have carefully developed various procedural plans for our projects, to make sure that the clients get successful installation service for each. We have dedicated project managers who oversee specific jobs for the clients including engineered drawings for their projects and approves a site specific plan of safety. Our equipment manager will make your elevators ready for selection and will help you get the job done by taking care of the installation and maintenance process if needed. We can easily reach all the service and construction locations and provide the expertise and capability that we possess – no challenge is too much for us. If you are need of a reliable service in Mumbai that can take care of all your elevation needs without making you break the bank then it is time you tried us and saw the difference in services for yourself.

## STACK CAR PARKING

Stack Parking is the economical and simple parking solution for new Buildings or existing Societies where Parking can be doubled. This is a Two Level Parking system; where one car is parked on the ground level and one on the first level. The car on the ground level will need to be moved out before parking / removing the car on the raised platform. A brilliant way to save parking space, Car stackers have found applications where the number of cars exceed the amount of parking space. A car stacker solves this by stacking one car above the other using hydraulic mechanisms with easy & safe operation. We manufacture and supply an exclusive range of cost effective Car Stackers with varieties of capacity & sizes.

## TRIPLE STACK CAR PARKING

Triple Stack Car Parking Systems can also be configured for drive-thru operation, having as many as three deep for maximum efficiency. We can accommodate both sedans and SUV's on all levels. Triple Stacker Parking Lift utilizes a hydraulic and cable lifting system that is both efficient and safe. Each Triple Stacker features our unique anti-fall rods on each column as well as steel locking hooks for each level. These lifts, when installed in rows and sharing common legs, dramatically boost space efficiency. Individual key-operated control boxes for high-density, valet operations come standard with each VSS-PH3 Triple Stacker. Our Parking Stackers are engineered to lift motor vehicles for parking purposes but also suitable for car dealers to use as a showcase with glass cover around the steel construction.

# PIT CAR PARKING

(2Pit + Ground) Working Principle Three spaces of top, middle and bottom are united and lift together. Usually, the middle and bottom spaces are underground in the pit. The top level space is in the same line with the ground for cars parking in and out directly. The middle and bottom spaces may park cars when it is lifted. Characteristics of the System Save land area and take full use of the underground space. It requires 4mtrs pit and 6mtrs above ground.

# PUZZLE CAR PARKING

Puzzle Parking System is a multi-level parking system having vertical as well as horizontal motion for Puzzle Parking System. Multiple parking cars to the limited parking space, save a great deal of room. It is an ideal product for outdoor installation and can go up to 4 levels above ground (Entry Level+4 levels) for Puzzle Parking System. It is operated on microprocessor based system. Upper level parking are strictly for sedan cars while at entry level there is a provision of SUV s in the standard model comfort for Puzzle Parking. However we can design the higher rating systems as per the actual requirement for Puzzle Parking System in Mumbai. Advantages: Independent parking. No need of operator The system is available in 2 to 6 levels both above and below the ground or in combination as well Saves money Grid structure is flexible The system has built in operational and functional safety features User friendly and cars can be retrieved using Push button / coded keys or Smart cards Puzzle Parking System in Mumbai.

## CAPSULE LIFTS

Capsule lifts are special lifts installed on the exterior face of the building or in the lobby or at a place where it can enhance the elevation and look of building. Capsule Lifts have plush interiors, large transparent glass panels providing panoramic view of the surrounding, rightly called as the ornaments of a building. Capsule lifts can accommodate from 6 persons to 23 persons for a single glass capsule. We have completed capsule lift in Octagonal and hexagonal shapes. They enhance the look and appeal of the structure and its design, features and options serve optimum transition comfort between floors.

## BUNGALOW LIFTS

Being a trend at present, these lifts are commonly used in bungalows. These lifts are good options for physically challenged people and possess a good working mechanism and latest designed too. We manufacture the finest quality bungalow lifts that include exclusive features and highly secure functions that will be easy to use by a common person. Also, we take care of all safety measures in such lifts and give them complete security through all ways.

## DUMBWAITERS

Dumbwaiters are used to Carry Food, Crockery, Utensils and Other Material in Hotels, Banquets, Restaurants, Canteens, Hospital, etc. In Hotels, Banquets, etc. In Hospitals the Dumbwaiter Elevator is used to carry Sterile or Non Sterile Material from Floor to Floor for Various Purposes. These Dumbwaiter Elevator Offer Smooth Travel and Precision Leveling so as to ensure no damage to the Payload in the Elevator. The Cabin and Doors are manufactured using Stainless thereby making it safe for use in Food and Hospital Industries.

# TYPES OF ELEVATORS DOOR

There are many different types of doors that can be installed in lifts, all of which can be divided into manual and automatic. Manual doors are usually opened and closed manually by the user, while automatic ones are powered by a door operator. Both manual and automatic doors can be further subdivided into different categories.

**Collapsible Lift Door**

## MANUAL DOORS

Typically found in older buildings, these lift doors are normally operated by the user, although some close automatically. They are most common in older and small European lifts dating back to the 1950s and 1970s.

In some cases, the door can be spring-loaded, meaning the gate cannot be left open, or the gate might close automatically when the user presses the button and partially or fully open when the lift arrives at a floor.

**Telescopic  
Opening Door**

**Center Opening  
Auto Door**

**Glass  
Auto Door**

## AUTOMATIC DOORS

These types of lift doors are considered the standard in modern buildings. Nearly all automatic doors are powered by a door operator in the cabin and can be found in a wide variety of locations, such as retail stores, schools, hospitals, airports, and shopping centers. Automatic doors offer many different features that manual doors do not, including traffic sensors, pressure sensors, speed controls, and obstacle detection. They can also have different types of opening. Single opening refers to a single panel door the width of the doorway that opens to the left or the right.

## TELESCOPIC SLIDING DOORS

Telescopic doors are usually found in small spaces, as their opening mechanism does not require the doors to slide all the way through the side walls. The doors open and retract, requiring less interior wall space and providing a larger automatic opening than traditional lift doors. Telescoping swing doors can have different styles:

- Sliding doors.
- Central opening or panel opening.
- Stainless steel doors.
- Glass doors.
- Fire rated doors.

## SWING DOORS

Swing doors are commonly installed for pedestrian use. They can open and close automatically and are easily installed in residences and other similar buildings. Swing doors come in a variety of styles:

- Solid doors.
- Vision panel doors.
- Glass doors.
- Aluminum doors.
- Stainless steel doors.
- Fire rated doors.
- Eco bus folding doors.

## OUR SERVICE

We are proud to claim that we have a strong team of qualified, well experienced expert technicians who have proven be the best in this field. Our team includes qualified professionals who are extremely skilled in their area of know-how. Upholding services to the total satisfaction of our customers at an efficiently reasonable price.
